

Marknexia Preliminary Name & Namespace Clearance Report

Date: 2026-09-05 **Scope:** Preliminary commercial screening for a Windows Markdown viewer / documentation product. **Candidate:** Marknexia

Legal notice: This is a research and risk-screening report, not legal advice, a trademark opinion, or a guarantee of registrability. Final clearance should be performed by qualified trademark counsel in each launch jurisdiction.

Executive conclusion

Current recommendation: CAUTION / PROCEED TO LEGAL CLEARANCE

The exact string **Marknexia** produced no obvious web-search results in the searches performed for software, apps, GitHub, NuGet, npm, Microsoft Store, trademarks, or general company/product usage. That is a positive signal.

However, the name is **not yet clean enough to call “cleared”** because the root element **NEXIA** is heavily used and protected in software/electronics/technology-related fields. Examples include live/registered NEXIA marks in the United States and India, including Class 9 computer/software-related goods, and a registered Canadian NEXiA mark for downloadable software. The exact composite **MARKNEXIA** is different, but the shared **NEXIA** element increases the need for professional likelihood-of-confusion review.

There is also an active Indian company named **MARKNEXA MARKETING (OPC) PRIVATE LIMITED**, incorporated in October 2025. Its business is wholesale trade rather than software, so it is not an obvious direct product collision, but it is a close spelling and should be disclosed to counsel.

The current domain screen shows **marknexia.app** and **marknexia.dev** as available through the checked registrar service. **marknexia.com could not be verified because the registrar availability endpoint returned a connection error on repeated checks**; therefore the .com status is unresolved, not “available” or “registered” based on this audit.

Decision matrix

Area	Result	Confidence	Notes
Exact web/product collision	GREEN	High	No exact Marknexia result in targeted searches

Area	Result	Confidence	Notes
Exact software namespace collision	GREEN	Medium	No indexed GitHub/NuGet/npm/VS Market-place/MS Store hits found
India company-name similarity	YELLOW	High	MARKNEXA MARKETING (OPC) PRIVATE LIMITED exists
NEXIA trademark family	YELLOW/RED	High	Multiple Class 9 / technology-related NEXIA registrations
India trademark exact hit	GREEN*	Medium	No indexed exact Marknexia result found; official portal requires interactive search
WIPO exact hit	GREEN*	Medium	No indexed exact Marknexia result found; official DB should be searched directly
Microsoft Store public search	GREEN*	Medium	No indexed exact hit found; Partner Center reservation is authoritative
<code>marknexia.app</code>	GREEN	High	Checked registrar reported available at USD 11.99

Area	Result	Confidence	Notes
marknexus.dev	GREEN	High	Checked registrar reported available at USD 11.99
marknexus.com	UNRESOLVED	Low	Availability service connection failure on repeated checks

* These are screening results, not database-certified legal conclusions.

1. Trademark screening

India

The official Indian Trade Mark Registry public-search portal is available at tmrsearch.ipindia.gov.in/ESEARCH. It uses an interactive search flow and currently requires OTP/captcha, so the browser-indexed search cannot be treated as a complete database query from this environment. The portal itself is the authoritative place to run exact, phonetic, and class-filtered searches.

A broad indexed search found **NEXIA** registered in India in Class 9 for audio/networked digital signal-processing equipment containing hardware and software (Application 2056268; proprietor BIAMP SYSTEMS LLC). It also found older Indian Class 9 NEXIA registrations for electronic goods. These are not exact **Marknexus** hits, but they establish an existing NEXIA technology mark family relevant to the assessment.

Sources: - IP India public search portal: <https://tmrsearch.ipindia.gov.in/ESEARCH>
- NEXIA India Class 9 record (secondary indexed database): <https://www.indiafilings.com/search/nexia-tm-2056268> - Older NEXIA India Class 9 record (secondary indexed database): <https://www.indiafilings.com/search/nexia-tm-1247407>

United States

Targeted indexed searches found multiple NEXIA Class 9 registrations/applications, including:

1. **NEXIA - Biamp Systems Corporation**, U.S. Registration 2993281, Class 9, for audio equipment and networked digital signal processing systems consisting of hardware/software.
2. **NEXIA - Nexia Intelligence LLC**, U.S. Registration 4280553, Class 9, for home automation systems and associated software.

3. **NEXiA - Innovation Associates, Inc.**, application/registration family for Class 9 downloadable software for prescription fulfillment operations.

These are strong evidence that NEXIA is not a blank technology field in the U.S. **Marknexus** adds the **Mark-** prefix, which can materially distinguish it, but counsel should assess whether consumers could perceive it as a brand extension or otherwise be confused.

- NEXIA / Biamp: <https://trademarks.justia.com/783/44/nexia-78344886.html>
- NEXIA / Nexia Intelligence: <https://trademarks.justia.com/854/51/nexia-85451742.html> - NEXiA / Innovation Associates: <https://trademarks.justia.com/907/85/nexia-90785175.html>

WIPO / international

WIPO's Global Brand Database supports searches by keywords, names, goods/services, and image similarity, and WIPO recommends checking national/regional registers as well. No indexed exact **Marknexus** result was found in the web screening; the live WIPO database should still be queried directly before filing.

2. Company / commercial-name screening

An active Indian company named **MARKNEXA MARKETING (OPC) PRIVATE LIMITED** is listed as incorporated on 18 October 2025 in Kerala. Its recorded business is wholesale trade, not software. A separate **MARKNEX INDUSTRIES LLP** is active in Pune and is engaged in machinery/equipment manufacturing.

These are not direct product conflicts, but **MARKNEXA** is close enough lexically to justify disclosure in a trademark attorney's search report.

Sources: - <https://www.zaubacorp.com/MARKNEXA-MARKETING-OPC-PRIVATE-LIMITED-U46909KL2025OPC097958> - <https://www.zaubacorp.com/companies-M-886>

3. Software namespace screening

Targeted indexed searches returned no exact **Marknexus** hits for:

- GitHub organization/repository search
- NuGet
- npm
- Visual Studio Marketplace / VS Code Marketplace
- Microsoft Store indexed pages

Important limitation: absence from public web indexes is not proof of namespace availability. GitHub organization names, private/private-reserved package identifiers, and Microsoft Store reservations may exist without being discoverable through public search.

4. Microsoft Store

Microsoft states that every Microsoft Store app must have a unique Store name. For an MSIX/PWA app, the name is checked and reserved in Partner Center; Microsoft recommends doing this as early as possible. Reservations can be removed after three months if unused. Microsoft also notes that a name may be unavailable even when no public Store listing is visible because another developer may already have reserved it.

Therefore **Partner Center is the authoritative test** for the Store namespace.

Source: - <https://learn.microsoft.com/en-us/windows/apps/publish/publish-your-app/add-on/reserve-your-apps-name> - <https://learn.microsoft.com/en-us/windows/apps/publish/partner-center/msix/manage-app-name-reservations>

5. Domain screening

The checked registrar service reported:

Domain	Result
marknexia.app	Available - USD 11.99 at check time
marknexia.dev	Available - USD 11.99 at check time
marknexia.com	Unresolved - availability endpoint failed repeatedly
marknexia.io	Unresolved - availability endpoint failed during the check

The .app and .dev results are current registrar checks, not a guarantee that registration remains available until purchase.

Recommended domain strategy:

1. Prefer **marknexia.com** if it proves available at a registrar you trust.
2. Otherwise secure **marknexia.app** immediately if the brand is legally cleared.
3. Consider **marknexia.dev** for developer/documentation positioning.

6. Similar-name risk

The most important finding is not an exact **Marknexia** collision. It is the **NEXIA family**.

Because the proposed product is downloadable software in Class 9, the following deserve attorney review:

- NEXIA / BIAMP - Class 9 software + hardware
- NEXIA / Nexia Intelligence - Class 9 software/home automation
- NEXiA / Innovation Associates - Class 9 downloadable software
- NEXIA / other software/service registrations in Class 42

The risk is **not automatically high**: the complete mark MARKNEXIA is longer and contains a distinctive prefix. However, a legal professional should assess visual, phonetic, conceptual, and market-channel similarity.

7. Recommended trademark filing strategy

For a product that starts as a Windows desktop Markdown viewer and may expand into documentation tooling/SaaS:

Primary word mark

MARKNEXIA

Likely Nice classes to discuss with counsel

- **Class 9** - downloadable computer software / software for Mark-down/document rendering, viewing, navigation, diagram rendering, developer productivity
- **Class 42** - software as a service, hosting, software development, and related technology services if/when those offerings are genuinely used or planned

Do not copy the sample wording above directly into a filing without counsel confirming the exact goods/services specification for the relevant jurisdiction.

Logo

File/protect the distinctive logo separately where commercially justified.

8. Required final clearance actions

Before public launch:

1. Run exact, phonetic, and similarity searches in the official IP India database.
2. Run equivalent searches in USPTO and WIPO, then relevant launch-market registries.
3. Have trademark counsel assess the NEXIA family and MARKNEXA similarity.
4. Check and reserve **Marknexus** in Microsoft Partner Center.
5. Secure the preferred domain(s) after legal risk is acceptable.

6. Secure GitHub organization and repository names.
7. Reserve/publish package namespaces only after the brand decision is final.
8. Preserve dated evidence/screenshots/PDF exports of the clearance results.

Final recommendation

Do not abandon Marknexia yet. The exact composite appears promising and no obvious direct software collision surfaced in the current screening. However, **do not treat it as legally cleared** because the NEXIA component has substantial existing trademark activity in technology/software, including Class 9.

Overall risk rating: YELLOW - potentially viable, attorney review required

If counsel concludes that the combined mark is sufficiently distinctive and not confusingly similar in the target classes/markets, Marknexia is a strong candidate for the product.
